# Schedule and topics 2023

valid from 01.01.2023

Issue	Date	Topics
January	31.01.23	Digitalisation
February	28.02.23	Freight transport
March	31.03.23	AI + Machine Learning
April	28.04.23	Predictive Maintenance + Rolling Stock
May	31.05.23	Condition Monitoring
June	30.06.23	Railway market North America

# Schedule and topics 2023

valid from 01.01.2023

Issue	Date	Topics
July	31.07.23	Training and further education with railway simulators
August	31.08.23	Infrastructure and BIM planning
September	29.09.23	Control and safety technology
October	31.10.23	CBTC/ETCS
November	30.11.23	EULYNX/Digital interlockings
December	29.12.23	Railway market Europe

# Sponsored Content

valid from 01.01.2023

Sponsored content articles are promotional articles in the style of an insight or whitepaper that are integrated into the editorial content of our website and marked as sponsored content.

Your sponsored content is marketed for one month on our landing page under "Spotlight topic" and can be downloaded as an insight from our website for six months.

## Duration

1 month on the landing page  
6 months under "Insights"

## Text length summary

Between 100 and 150 words

## Text length Insight

max. 5 pages

## External links

Unlimited in the whitepaper itself  
In the summary max. two

## Price

\$ 400,- excl. VAT for one DIN-A4 page  
each additional page \$ 250,- excl. VAT  
additionally

The screenshot shows the AMR Rail Market Research website navigation bar with links for Market Reports, Insights, Events, News, About Us, Contact, and Newsletter. Below the navigation is a large white box labeled "Spotlight topic". Underneath, there is an article titled "True-to-life simulation improves training for train drivers" by a woman, with a "Read more" link. To the right of the article is a small photo of the author. At the bottom right, the CORYS logo and "January 2023" are visible.

## Spotlight topic

### True-to-life simulation improves training for train drivers

The French company CORYS has been developing simulators for 30 years, making it possible to optimize training costs, improve employees' skills and increase their operational safety and efficiency.

The new Ultra Light Simulator offers the full Replica Simulator experience in a compact, mobile format that can be easily transported and set up for a large number of trainees. This new system, the result of several years of research and development at CORYS, incorporates a simplified version of the physical elements of a Replica Simulator that provide the realistic mechanical simulation of a train, and over an authentic 3D environment with track bodies and signals. The simulated tracks include a validated ETCS system developed by a dedicated ETCS team at CORYS. The simulator complies with ERA Baseline 2 (SRS 2.3.0.d) and Baseline 3 (SRS 3.4.0 and 3.6.0) and covers levels 0, 1, 2 and 3. It also has DMIs with one or two screens.

A company introduction of up to 85 words can be placed on the product page for your Insight. Under "Description", the summary of the home page is published.

You can design your own cover page. If you do not submit one to us, we will create a suitable one, see example:

**CORYS**

**TRUE-TO-LIFE SIMULATION  
IMPROVES TRAINING FOR  
TRAIN DRIVERS**

### True-To-Life Simulation Improves Training For Train Drivers

The French company CORYS has been supplying training simulators and technical simulators for over 30 years. The company's transportation division specializes in simulating railroads, subways and streetcars. From 1:1 replica simulators for full immersion to tablet simulators and easy-to-use on-demand simulators, CORYS has developed a wide range of technologies that can be used on all simulator types. The company uses the most advanced modeling tools, faithful virtual environments and control panel replicas that meet the highest technical industry standards.
